

Spread in Array

Const p=[12,56,89]

Const q=[p,100,2,32]

Then q will be [[12,56,89],100,2,32]

Index will be 0 1 2 3

That's why we use spread (...)triple dot

Const q=[...p,100,2,32]

q will be [12,56,89,100,2,32]

Index will be 0 1 2 3 4 5

```
> const sub1=["Maths","Science"]
< undefined
> const sub2=["History","Eng"]
< undefined
> const allSub=[...sub1,...sub2]
< undefined
> allSub
< ▶ (4) ['Maths', 'Science', 'History', 'Eng']
> |
```
